

SCREEN SAVER DISPLAYING IDENTITY CONTENT

ABSTRACT OF THE INVENTION

5 A real-time communications system of networked communications devices,
method and program product for operating such a system. A screensaver resides on at
least one of the communications devices, that selectively displays status information
on a corresponding identified user. Presence and availability information about the
particular system user is stored on a central storage and provided to the screensaver
10 for display. Information on the screensaver apprises viewers of current user presence
and availability status.
